This present chapter provides information on each country's PPPs, exchange rates and price levels for the period from 2017 to 2023. It also contains information on a selection of indicators from a national, regional and global perspective in 2021, as follows:

- **Population** is the official population estimate as received from national statistical offices.
- **Exchange rate (LCU/USD)** is the official exchange rate of each country's local currency to the United States dollar (USD) as received from national statistical offices, with the exception of the Sudan, whose exchange rate represents the equivalent exchange rate, and not the official exchange rate as provided by the national statistical office of the Sudan.
- **LCU** is the local currency unit of each country.
- **OMR** is the local currency of Oman, the Omani rial.
- **PPP (LCU/USD)** is the calculated PPP for each country relative to the dollar.
- **GDP (in billion USD)** is the real, or PPP-based, GDP in millions of dollars.
- **Per capita GDP (in dollars)** is the real, or PPP-based, per capita income in each country in dollars.
- **Per capita AIC (in USD)** is the real, or PPP-based, per capita actual individual consumption in each country, representing material wellbeing, measured in dollars.
- **Most expensive category** shows the household consumption item group that is the most expensive in each country relative to Oman.
- **Least expensive category** shows the household consumption item group that is the least expensive in each country relative to Oman.
- **Expensiveness (total economy)** shows the ranking of each country, from the most expensive in the region or the world to the least expensive in terms of expensiveness at the level of the total economy or GDP.
- **Per capita income** shows the ranking of each country, from the highest in the region or the world to the lowest in terms of wealth or per capita income.
- **Individual well-being** shows the ranking of each country, from the highest in the region or the world to the lowest in terms of per capita actual individual consumption or material well-being.
- **Economy size** shows the ranking of each country, from the largest economy to the smallest economy in terms of real GDP.
- **Expensiveness (household consumption)** shows the ranking of each country, from the most expensive in the region or the world to the least expensive at the level of household consumption.
- **Expensiveness (investment)** shows the ranking of each country, from the most expensive in the region or the world to the least expensive in terms of the level of investment or gross fixed capital formation.
- **Per capita government spending** shows the ranking of each country according to per capita government spending, from the highest to the lowest in the region or the globe.
- **Per capita investment spending** shows the ranking of each country according to per capita spending on investment, from the highest to the lowest in the region or the globe.
- **SAR** is the local currency of Saudi Arabia, the Saudi rial.

This report presents the most recent results of purchasing power parities (PPPs) which the United Nations Economic and Social Commission for Western Asia (ESCWA) produces for the Arab region. PPPs are the result of extensive collaborative work by the price statistics team at ESCWA, under the framework of the International Comparison Program (ICP), one of the largest global statistical initiatives. To produce PPPs, the team works closely with partner countries in the Arab region and collaborates with the programme's implementing agencies in other regions of the world. In addition to PPP results, the report features key findings, and provides a thorough comparative analysis of countries in the Arab region. A total of 176 countries participated in the 2021 ICP global cycle; 20 of these were Arab countries. The Arab region has become an ICP pioneer: the ICP regional office at ESCWA has succeeded in turning the ICP into an integrated price statistics programme, producing purchasing power parity estimates on an annual basis, more regularly than the usual three-year ICP cycle. The regular annual calculation of PPPs and relevant key economic indicators provides a basis for sound and reliable spatial comparisons and economic analysis.

The report presents purchasing power parities, price level indices, income levels, and total and per capita expenditure for the Arab region for the period from 2017 to 2023. For 2017 and 2021, years when global ICP data was available, it presents the results for the Arab region in a global context. The report provides reliable information about the real size of the Arab economy in relation to the real size of the world economy, and of the real sizes of Arab economies relative to one another and to other economies across the globe. It also provides an overview of the major changes in spatial comparisons over time, and tracks key economic indicators across the years. The main objective of PPPs is to reflect the real purchasing power of currencies, which is usually distorted by exchange-rate conversions. The uses and benefits of PPPs are rapidly expanding across all areas of socioeconomic analysis. One of the main uses of PPPs is to provide real measures of economy size, allowing economic indicators to be compared between different countries. They are also used to calculate indicators that track progress in achieving nine of the Sustainable Development Goals, namely Goals 1, 2, 3, 4, 7, 8, 9, 10 and 11.
